Jitney Pilot Study

For 78749 Zip Code

Capital Metro is considering implementing a jitney to replace underutilized bus services in the Austin area. A jitney is a mode of transportation between a traditional bus service with stops and a private transportation service.

Two kinds of routes are typically used with a jitney service: Fixed and Semi-Fixed Routes. Fixed routes have designated stops, but can stop anywhere along the route to pick up passengers. Semi-Fixed routes have a general route and can pick up passengers by request away from this in what is called a service area.

In this study, a ridership potential analysis for both fixed and semi-fixed jitney routes was performed for the 78749 zip code in Austin, Texas. Data was collected from the US Census Bureau, Capital Metro, and the City of Austin.

In this study, traffic was not considered in the analysis or any changes in the roads since the data for layers used were created are not considered.

The walking distance of 0.25 miles were used in the study to create buffers (service areas) around the fixed route and a driving distance of one and two miles were used to create a service area for the semi-fixed route.

Results of the study:
5 households/businesses located within the 78749 ZIP code are **not** receiving Jitney service.

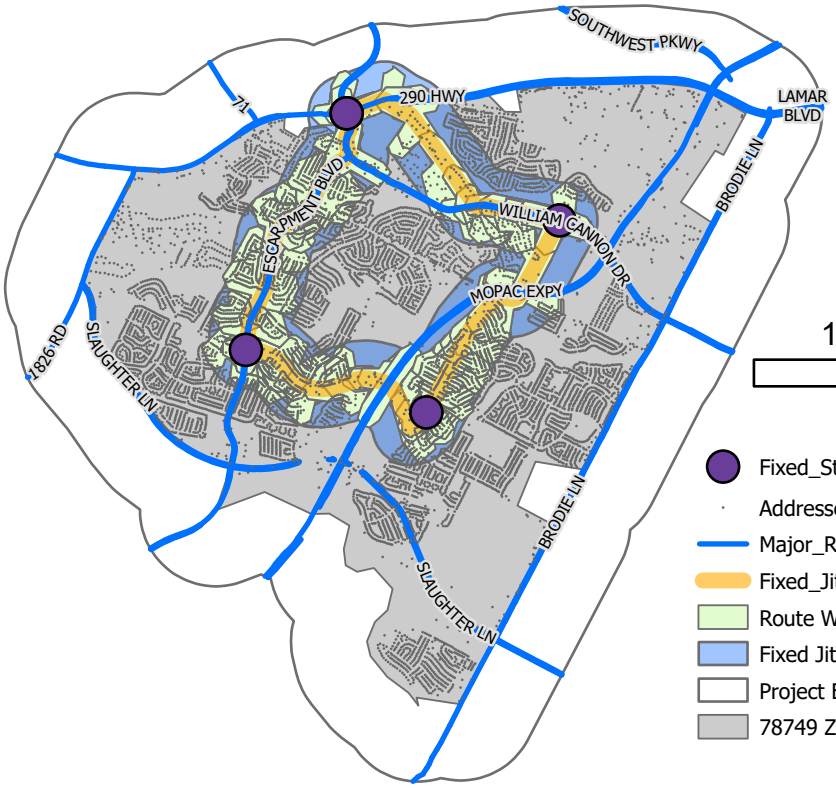

27.7 percent of the total households/ businesses in 78749 are located within the Fixed Jitney Route Walking Distance.

99.996 percent of the total households/ businesses in 78749 are located within the Semi-Fixed Jitney Service Area.

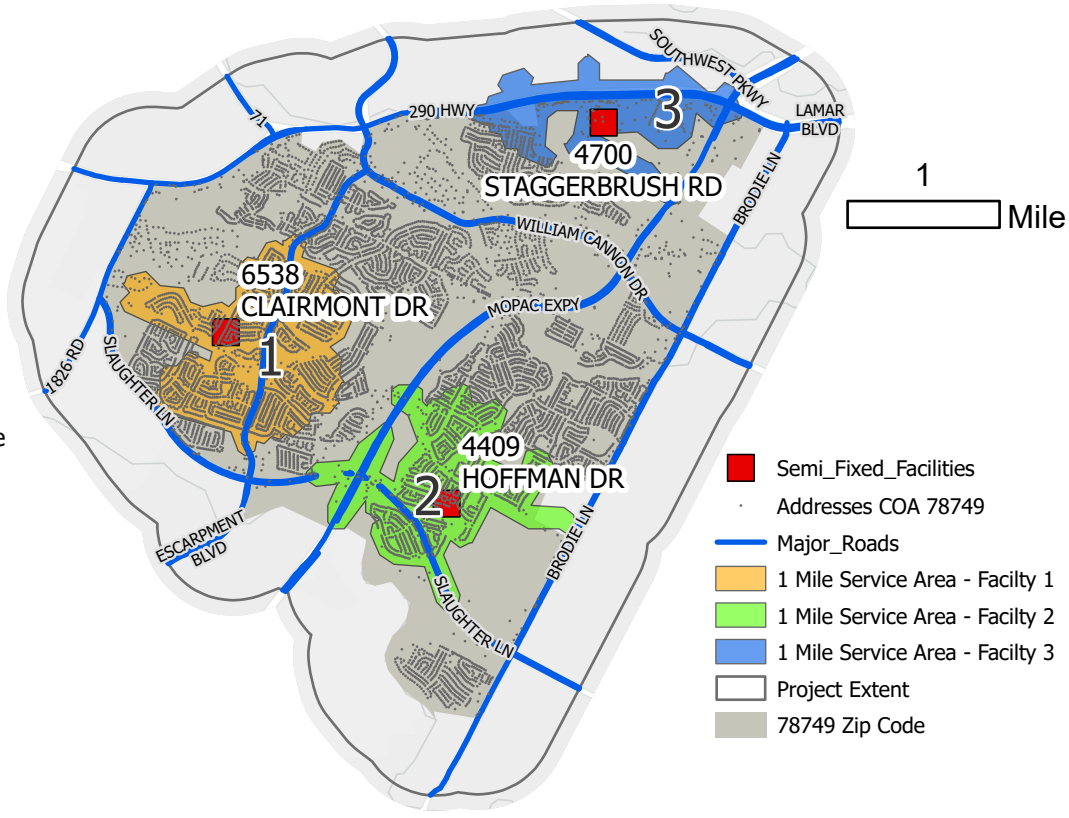

93.1 percent of the total household/ businesses in 788749 are located within the semi-fixed jitney service areas from origination facilities

Even though semi-fixed route covers more people if you include automobiles. It is suggested here that both fixed and semi-fixed routes should be tried and more studies on the cost of each can factor into the final decision. A hybrid of the semi and fixed routes could be proposed where a jitney could be fixed at a certain time interval, like during the work week times and the semifixed can be used at other times.

Fixed Route

Semi-Fixed Route
